

CLAIMS

1. A plate shaped battery comprising:
a wrapping member sealing a power generating element generating power,
5 forming a seal portion with one part of said wrapping member and the other part
thereof overlapping with each other, and having the shape of a wrapper; and
an exterior member having a recess for receiving said seal portion.

2. The plate shaped battery according to claim 1, wherein said exterior
10 member has an electrical conductivity and surrounds said wrapping member.

3. The plate shaped battery according to claim 2, wherein said exterior
member is electrically connected to one of an anode terminal and a cathode
terminal.

15 4. The plate shaped battery according to claim 1, wherein an anode
terminal and a cathode terminal extend from almost a middle portion of said power
generating element to the outside thereof, further comprising a support member
supporting said anode terminal or said cathode terminal, extending to the outside
20 thereof.

5. A portable radio terminal using a plate shaped battery according to claim
1.
